

Keynote: Greg Kennedy

October 11, 2017

1. What areas of space investment do you find most interesting right now? How do you see these areas evolving?
2. Did your experience leave you thinking that NASA's budget should go up or down as a share of the total? What do you expect?
3. How do you get investors, even VC investors, to look beyond a typical time horizon and put capital into high risk space?
4. A key to investment capital is the return on investment. With NASA budget staying flat, in your opinion, where is the revenue going to come from?
5. What other Big Data collection opportunities do you see in commercial space sector?
6. Do you see a separate space commodities market as viable when off planet resource mining takes off?
7. In the group picture, who was holding the Flag?
8. Where are the pain points in commercial industry today? What are the problems and areas of opportunities for entrepreneurs?
