

Keynote Address: Reaching the Commercial Space Tipping Point – A Space Portal Perspective

Dan Rasky

October 10, 2018

1. The I in ISPCS is for international, but I'm hearing quite a bit of US only rhetoric from the stage this afternoon. How do we square those?
2. NASA transferred a LOT of technology to SpaceX (PlcA for example) for COTS. The well of technology is not so deep for lunar relevant technology. Will NASA pay for some of this?
3. You ask who will win the new Moon race. What does it mean to "win" this "race"?
4. How, if at all do you see LOP-G fitting in to the commercial future
5. You forgot Paragon as a tipping point winner...
6. If you had to revise your list of space customers from the 2005 slide you presented, who would you add in 2018?
7. How long can a BFS last on a lunar day with LOX on board?
8. Do you agree with Autry that NASA should continue with SLS +LOP-G AND stimulate commercial lunar alternatives simultaneously?
9. How did Pete Warden pave the way?
