

Keynote Address: Tipping Point? We've already tipped!

Mark Vande Hei

October 10, 2018

1. In light of the new NASA OIG report criticizing development of the SLS core stage, have we reached a tipping point for SLS?
2. Which is easiest to unpack; Dragon, Progress or Cygnus?
3. As an astronaut, does the more severe deep space radiation environment concern you?
4. Does NASA think of the moon as primarily valuable for facilitating exploration, science, or commercial development in space?
5. What was your accumulated dose during your stay on ISS, versus Earth-based average? Noticeable consequences?
6. Please comment on international partner involvement in the future lunar program.
