

## **Keynote Address: Commercial Partnerships as a Tipping Point for NASA Science**

**Steven Clarke**

October 10, 2018

1. Can you tell us more about the CLPS process? How do you think the hurdles for a bidder to be accepted in December?
2. How is NASA working with primary payload customers to feel comfortable with ride share payloads?
3. Any work in data analytics?
4. NASA used to have a tag line, "Innovation drives Exploration". I contend "Exploration drives innovation." With which do you most resonate?
5. How can Science Missions and Commercial objectives work hand in hand?
6. Should we bias our micro-gravity space biological sciences toward "discovery" based science or "hypothesis" based science? In other words, just seeing what happens in complex systems or controlled experimentation?
