

Panel Discussion: Law, Policy and the Meaning of Commercial Space

Franceska Schroeder

October 10, 2018

1. What's your thoughts (pro and con) for Other Transaction Authority? Ever had OTA contracts for commercial space contracts?
2. What are the biggest legal questions moving beyond LEO and GEO, such as the Moon or Mars?
3. Blue Origin: how do you foresee NASA allowing human-tended commercial New Shepard flights through NASA Flight Opportunities?
4. What are the implications of IP used on your rockets and the FAR "unencumbered" clauses if your company has not vetted your engineering for violations of technology IP? How do you make sure in the commercial speed of development that your engineers are not violating other companies IP rights?
5. ULA has put forward an offer to buy Hydrogen and Oxygen in space. Will the same offer be coming forth from Blue and SpaceX? Did ULA consider chain of ownership and taxes in that offer?
6. Environment Assessment Expectations for Launch to Orbit changes recently (de-Orbit; second stage; etc.)?
7. How does indemnification fit into the discussion?
8. What are your impressions of the ongoing FAA efforts for launch and reentry licensing reform?
