

## **Keynote: Stephen Jurczyk**

October 11, 2017

1. What share of NASA's mission/money is being devoted to building up the commercial sector vs deep space exploration?
2. Any interest in space debris removal?
3. You mentioned that the Air Force was a large partner with NASA, so what are your thoughts on the possible new Air Force branch that would specifically be created for space?
4. What partnership opportunities are there for lunar resource prospecting/extracting companies to get involved with today?
5. What has been done to address water and air quality challenges required for the tourist economy, and eventually, mining and manufacturing?
6. Is NASA interested in augmented reality research?
7. SCI 2015 technology studies sound a lot like Data's XS-1. Cooperative studies or...?
8. Where are we with hypervelocity aero transport systems and as a potential horizontal launch platform for small sat?
9. Has NASA considered capabilities centered around removing space junk?
10. Partnership opportunities for lunar ISRU?
